Time to Upgrade Your Wacom Experience

Important: End of Driver Support by September 2025

If you're using a legacy Wacom tablet or display, your device will no longer receive driver updates after September 2025. That means:

No guarantee it will work with future hardware or operating system updates

Risk of interruption to your creative workflow

No repair parts or accessory updates available — current stock only!

Legacy products will remain functional with the current drivers on supported operating systems. However, future driver updates will no longer support these legacy products. You will need to continue using **the current driver version, which will not receive future security patches or system updates.** This may lead to compatibility issues as operating systems evolve.

List of Products
